Gatekeeper

Turnstile and access control

MOJO BARRIERS — PRODUCT DATA SHEET

Gatekeeper

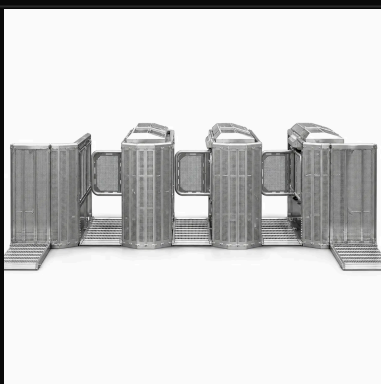

Gatekeeper is a turnstile and access-control system for entry and exit at events, venues and designated areas. It counts visitors on its own or works with ticket-scanning systems.

RFID · QR
AND BARCODES**real time**
CAPACITY DATA**Count ·
Limit**
DIFFERENTIATE**2.28 × 1.07 m**
LANE, APPROX.

01

GATEKEEPER

Gatekeeper manages entry and exit at events, venues and designated areas such as VIP or staff areas. On its own, it counts and, if required, limits the number of people entering or leaving. With a ticket-scanning system, it forms an automated, controlled entrance. The turnstile links to a central computer system that gives accurate real-time capacity data. Gatekeeper works with common scan methods.

LANE MODULES

TURNSTILE DETAIL

02

THE TURNSTILE

The cross-shaped turnstile forms a physical barrier to the event or designated area. Its automatic locking prevents access once capacity is reached. Gatekeeper can be combined with the Mojo barrier system to link entrance points and create emergency exits.

03

THE COMPUTER SYSTEM

Specialist software controls all entrances and exits from one central workstation and lets staff respond to ticket issues from there. Settings include Count for people coming in, Limit for automatic locking once capacity is reached, and Differentiate for real-time counts in and out.

KEY BENEFITS — GATEKEEPER

1. Compatible with common scanning systems such as RFID, QR and barcodes
2. Ticketing data stays with the client; Mojo Barriers needs no access
3. Combines with the Mojo barrier system
4. Cross-shaped turnstile with four arms discourages illegal access
5. Can reduce staff for ticket checks
6. Real-time capacity data
7. Control from one central computer system
8. Automatic locking once the capacity limit is reached
9. Emergency override button
10. Weather-resistant

TECHNICAL SPECS — GATEKEEPER

	GATEKEEPER
Lane (length × width)	approx. 2.28 × 1.07 m
Turnstile	cross-shaped, four arms, automatic locking
Scanning	RFID, QR codes and barcodes; can hold ticket-scanning hardware
Control	one central computer system, real-time capacity data
Settings	Count · Limit · Differentiate
Emergency override	via button
Weather	weather-resistant
Connection	can be combined with the Mojo barrier system
Weight	on request
Details can vary slightly between production series; your rental company will confirm the exact values.	

04

THE SCANNING

Gatekeeper works with common scanning technologies, from barcodes to RFID and QR codes, and can be adapted to hold ticket-scanning hardware. This can replace hand scanners and their operators. The turnstile opens only when the ticketing company's database confirms the ticket as genuine, which helps reduce ticket fraud. Mojo Barriers needs no access to this data; it remains with the client.

CERTIFICATION

INDEPENDENT TESTING

No separate certificate is available for the Gatekeeper. Certificates and test reports for the Mojo barrier range are listed on the certification page.

Mojo Barriers BV develops its barrier systems and has had them independently tested since 1996. Certification is carried out by independent bodies such as TÜV NORD.
